

Flor-s

Radio-controls with 4.5 million billion combinations.

433.92MHz rolling code system with self-learning function and sequential code for multiple insertion (Flor-sc).

Flor is the ideal solution for the management of multi-use systems

with a unique and personal code: the self-learning receivers are able to receive and store up to 1020 codes. Using the BUPC palm-top device, **the Flor-sc model** makes it possible to memorise entire packs in one operation, without even having to open them. Rolling code transmission: **absolutely secure** because it's absolutely impossible to clone the transmitter

Self-learning function: the codes can be entered at a distance with an authorised transmitter or with a programming button on the receiver while a LED displays the different functions.

A drop in consumption but greater independence.

The Flor-s system includes:

Transmitters with 1, 2, 4 channels
Universal receivers with 1 or 2 channels, modular, plug-in or for outdoors, IP53, with step-by-step, timer and anti-burglar functions
 The **aerial** can be incorporated in the Lucy flashing light or in the outdoor IP53 receiver, or fixed with a bracket

Flor, VR, Planotime receivers

Universal receivers with 1 or 2 channels, **modular**, Nice or SM (SMXI) **plug-in** connector **or for outdoors IP53**, with step-by-step, timer and anti-burglar functions.

The FloR and VeryVR systems can be interfaced with the BUPC and SMU palm-top devices

for an easy programming and management of the codes.

Management of multi-user system through the unique, personal code: the recognition receivers can receive and memorise up to 63 codes with BM250, 255 with BM1000 and 1020 when the modular receiver is equipped with 4 memory cards.

Memorisation: a particular receiver output can be associated to each transmitter key (e.g. key 3 TX= output 1 RX).

The aerial can be incorporated in the Lucy flashing light or in the outdoor IP53 receiver, or fixed with a bracket
